

Jaewook Lee (Ph.D., 2017-2022)

Improved Reservoir Property Estimation for Unconventional Shale Reservoirs

- Developing a statistical shale rock physics model and a more accurate shale reservoir property estimation method for unconventional reservoirs
- Improving seismic AVO modeling and inversion to detect the sweet spots for better shale reservoir characterization
- Applying machine learning (ML) techniques for enhanced reservoir property estimation

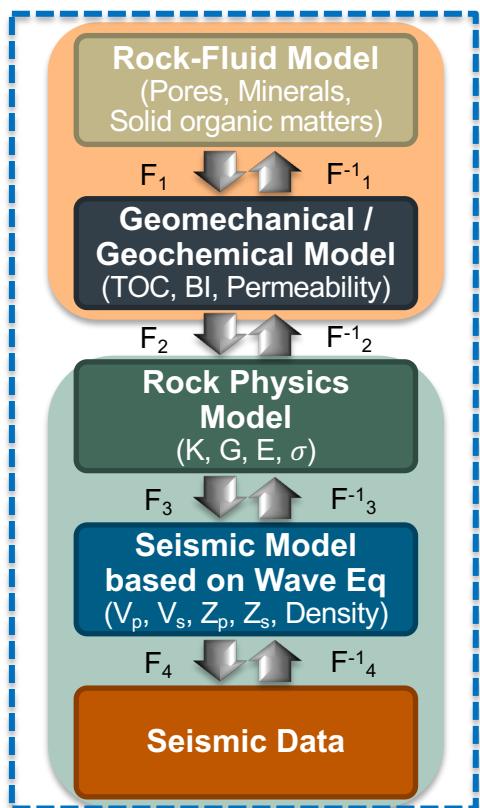

Jaewook Lee (Ph.D., 2017-2022)

1. Statistical Shale Rock Physics Modeling

- Exploratory Data Analysis (EDA)
 - Multivariate linear regression analysis
 - Nonlinear regression analysis
 - Sensitivity analysis (e.g., Frechet sensitivity test)
-
- **Total Organic Carbon (TOC)**: Lee & Lumley, 2019 SEG
 - **Brittleness Index (BI)**: Lee & Lumley, 2020 AAPG
 - **Shale matrix permeability**: Lee & Lumley, 2021 AGU

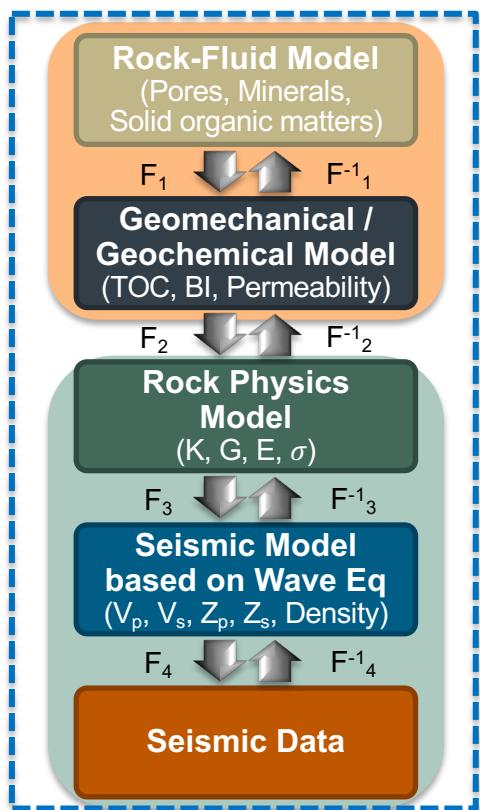

Jaewook Lee (Ph.D., 2017-2022)

2. Seismic AVO modeling & Inversion

- Statistical shale rock physics modeling
- AVO attributes for TOC and lithology (V_{Clay}) prediction
- Synthetic seismic AVO modeling
- Robust seismic AVO inversion to estimate two shale properties from seismic data
- **AVO attribute analysis and seismic modeling**
: Lee et al., 2020 URTEC
- **AVO inversion with real seismic data**
: Lee & Lumley, 2022 (in progress)

Jaewook Lee (Ph.D., 2017-2022)

3. ML-based Reservoir Property Estimation

- Linear and nonlinear regression analysis
- Supervised ML (e.g., Deep Feed-forward Neural Nets)
- Unsupervised ML (e.g., K-means Clustering)
- Shapley value analysis
- **Improving TOC estimation by using deep learning**
: Lee et al., 2022 AAPG Bulletin (accepted)
- **Predicting BI by using deep learning**
: Lee & Lumley, 2022 JPSE (submitted)
